

Monaco every winter.

Monte Carlo every summer.

Menvier Security every time.

Nice life, the Scott's lead. But who's looking after the house while they're away?

Observe the Menvier Security remote keypad flush kit so neatly and unobtrusively recessed into the wall. Yes, that's it, right next to the portrait of Great Uncle Alfred.

It houses the keypad that controls the Menvier Security Networker range of alarm control equipment at the touch of a few buttons.

The flush kit comes in a choice of white, chrome and of course brass, so it blends perfectly with all types of décor.

And it's the ideal solution for both residential and commercial properties.

'C'est parfait' as they say on the continent.

For further details on the Menvier Security Networker Range and the remote keypad flush kit, contact Menvier Security on 01594 545444

Chrome

Menvier Security is a leading manufacturer of security systems suitable for domestic to large commercial and industrial premises.

Menvier Security has developed the Networker Range of intruder alarm systems to provide an effective solution for all your security needs.

The control panels range from 2 to 1040 zones meeting the requirements of even the most complex and demanding building configurations. The main electronics are housed in a metal cabinet, which is mounted in a discreet area within the premises.

The remote keypad flush kit is compatible with all of the Networker Range keypads. These

include the Arming Station, LED, Starburst LCD and 32 character LCD, providing you with a versatile, yet simple to use security system.

The Networker Range offers the installer a choice of wiring techniques, enabling them to minimise the amount of cabling normally associated with an intruder alarm system.

All of the Networker Range provide the facility to connect a variety of remote signalling equipment, including Digital Communicators (DC54 & DC58) and BT RedCARE. Modem facilities are also available on selected models, which allows the installer to remotely access the system to program and assist with diagnosing faults (DC58M+ & DC6 Digimodem).
