Off to a good start

You want to look after what's important in life: your family, your home and yourself. With the wire-free Homelink⁷⁵ you're already off to a good start. It offers you some of the most advanced security technology available, from one of the world's leading manufacturers.

With over 20 years' experience, Scantronic builds state-of-the-art security systems which incorporate intelligence as standard. Intelligence that makes Homelink⁷⁵ more than a security system. Using mobile technology, Homelink⁷⁵ combines communications and security to bring you a system that not only protects what you care about, but tells you what you need to know – when you need to know it.

Whatever you're doing, whether at home, work or abroad, Homelink⁷⁵ gives you complete reassurance that your premises and all its contents are secure.

the basics

When it comes to choosing a security system, you need a solution that's reliable, easy to use and incorporates all the functions you require to protect the things you value. That's why we've developed Homelink⁷⁵. It has all the functionality to protect your property, as well as offering minimal disruption during installation.

a design for life

Homelink⁷⁵ is designed to fit in with your everyday life. Whether you're installing it in your family home, apartment or office, it can adapt to any location and lifestyle.

It's wire-free so installation is fast, with minimal drilling, no mess and no cables. It even recharges itself and comes with a full set of rechargeable batteries as standard. The keypad allows you to activate and de-activate your security system at the touch of a button through modern scroll and select technology – it can even be programmed for a child to use.

Homelink⁷⁵ also comes with a key-fob similar to a remote car alarm. The key-fob gives you complete control of your system while eliminating the need for access codes. And because Homelink⁷⁵ is designed for life, you can even take it with you when you move.

Handy key-fob for quick and easy access

Activate Homelink⁷⁵ at the touch of a button

Wire-free connection to motion detectors for no mess installation

Easy to use scroll and select technology

peace of mind

Whenever you leave the house during the day – for work, school or play – Homelink⁷⁵ is actively monitoring and protecting everything you want it to. Its mobile phone connectivity means it can notify you of any problems, wherever you are - it can let you remotely check the status of your home at any time and even allow you to switch all or part of the system on or off.

You don't even need a mobile phone to stay in touch, the system can be programmed to call any phone, anywhere in the world. Homelink⁷⁵ gives you complete peace of mind because it brings you complete home security.

monitors and protects

Homelink⁷⁵ has a number of features which enable greater protection of your family and your possessions. For example, if you have friends or family who prefer to live independently but may be vulnerable at home alone, simple call buttons can be provided. This Reassurance Link enables communication with an alarm receiving centre or nominated person via a mobile phone, should an emergency arise.

In the same way, Homelink⁷⁵ can notify you of events such as the children getting home from school. Homelink⁷⁵ can also connect with CCTV equipment, which it activates as soon as a potential intruder is detected – Homelink⁷⁵ does the thinking for you.

putting you in control

Homelink⁷⁵ gives you flexibility to protect as much or as little as you wish. It suits any size of home and you can monitor anything from a number of rooms to an individual item. For example, by using additional independent detectors you can safeguard a painting that is valuable to you, or other items such as your TV.

You can also fit sensors to notify you of flooding – particularly useful if you are away for any length of time, or if the property isn't always occupied.

Mobile phone connectivity for remote access

Wire-free intelligent motion detectors for all-round security

Safeguard valuable items with independent detectors

secure day and night

Homelink⁷⁵ means you forget about security worries. Whether you're out during the day, or away for the night – it constantly works to safeguard your home. With features such as intelligent motion detectors, you can go out night or day knowing that your pets are free to roam where you want them to – without triggering the alarm and without compromising your home's security.

You can also activate the system to only cover certain parts of the house. You may have a number of rooms that aren't always in use, or simply need greater freedom to accommodate others in your property. However you choose to use Homelink⁷⁵, and whatever time of day or night it is, you're safe in the knowledge that your property is protected.

safety first

Optional smoke detectors offer greater protection than stand-alone kinds. In the event of fire, the alarm sounds and the detector sends a signal to the control panel – and your mobile if you're out of the house. If you opt to have the system monitored, it will automatically notify the emergency services so immediate action can be taken.

thinking outside the box

Homelink⁷⁵ has been designed to fit your lifestyle in more ways than one. Designers have thought outside the more traditional 'alarm box' to bring you something that looks altogether less intrusive. For a security system that does so much, the casing is surprisingly small and lightweight, and its wire-free status means it fits in with contemporary living – a perfect Zen.

To find out how Homelink⁷⁵ could protect the things you value, please speak to your local stockist or electrical engineer.

Activate fire alarm for direct connection to alarm receiving centre

Quickly deactivate Homelink⁷⁵ when you come in
